

Bakker Groep Coevorden

Maintenance module Degasser

Bakker Oilfield Supply has many years of experience regarding maintenance and certification of oilfield equipment. Several leading companies in the Oil and Gas Industry choose Bakker Oilfield Supply for the maintenance of their material.

This particular maintenance is not only periodic maintenance but also preventive maintenance. All legal requirements are taken into account, such as approval under "Notified Body" (NoBo) and to maintain guidelines such as "Pressure Equipment Directive" (PED) etc.

Bakker Groep now offers maintenance for the Geothermal Degasser. Based on our knowledge and experience in the Oil and Gas Industry we composed a module based on all legal requirements as also the preventive maintenance for the Geothermal Degasser.

During maintenance, Bakker Groep can offer you the use of alternative (Rental) equipment. In this way you can still produce and you prevent downtime.

Bakker Groep Coevorden

Maintenance module Degasser

The maintenance will be carried out according to the B.O.S. Periodic Maintenance Instruction. Among others the subjects below will be taken into account during this Maintenance.

- Mandatory (legal) NOBO approval
- Inspections and Maintenance of the several appendages, among others the Pressure Safety Valve (PSV)
- Wall thickness measurements
- Re-certification
- Verification of the measure instruments

Should you have questions about our Maintenance module or other questions related to the Degasser or our activities in the Geothermal Industry, please contact Joël Bruins, (Geothermal) Sales Engineer. You can contact Joël via phone number: 0031 (0)524 599 666 or e-mail: sales@bakkergroep.nl.

You can also approach us at any time for a non-committal conversation or price quote.
